

the challenge on which I'm working is as follows:

Write a solution class with a main method. Construct the main method by copying
pasting these lines in the body of your main method.

```
for (int i = 0; i < args.length; i++) {  
    System.out.println("Hello, " + args[i]);  
}
```

or

or

```
for (String arg : args) {  
    System.out.println("Hello, " + arg);  
}
```

Change Theme Language Java 7

```
public class Solution {  
    public static void main(String[] args) {  
        System.out.println("Hello, World.");  
        System.out.println("Hello, Java 7.");  
    }  
}
```

```
2
3 public class Solution {
4
5     public static void main(String[] args) {
6         Scanner scan = new Scanner(System.in);
7         int a = scan.nextInt();
8         int b = scan.nextInt();
9         int c = scan.nextInt();
10        // Complete this line
11        // Complete this line
12
13        System.out.println(a);
14        System.out.println(b);
15
16        System.out.println(c);
17
18        // Complete this line
19        // Complete this line
20    }
21 }
```

Line: 9 Col: 14
